ASSEMBLING INSTRUCTIONS

- For the assembly, two union joints and four M8 Bolt sets are needed for each stretch (8 for H100 models).
- Tray installation for electrical systems should NOT run under other types of canalisations such as water, vapour or gas canalisations.
- To guarantee a good ventilation, we recommend installing the trays keeping a minimum distance of 250 mm between each tray.
- Trays which are placed on supports shall have to keep a gap of 20 mm from the wall to allow a correct ventilation of the cables.
- Suitable for wet, salty and chemical aggressive environments.
- Material with limited direct exposure to UV resistance. For use directly exposed to UV rays consult the family BASORPLAST BPE.
- To assure good performance under expansions, the increase in temperature must be noted, between the installation and the maximum temperature expected. Depending on the expected growth in the temperature (ΔT) leave a gap (h) between cable trays according to the following table :

ΔT (°C)	h (mm)
20	5
30	7
40	9
50	11

Accessories:

The family has a large range of accessories such as: cover, ik10 cover clamp, divider profile, horizontal bend, inside bend, outside bend, union joint, vertical adjustable union joint, horizontal hinged joint and screw set M8 PVC..
