The Panama Metro Line 1

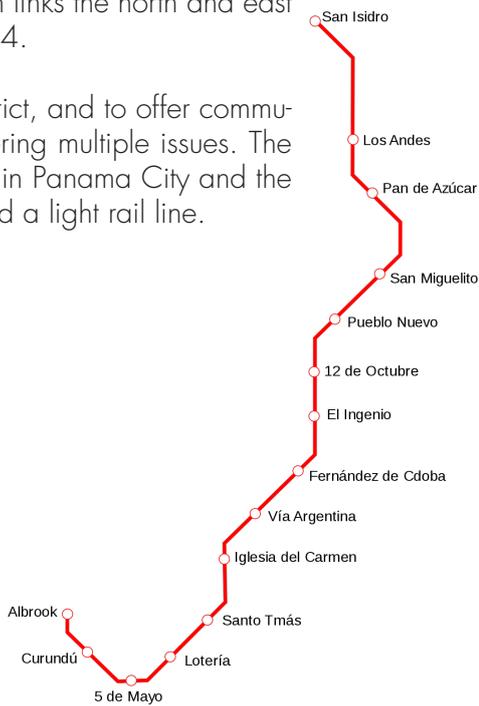

Rapid transit system in Panama City, Panama. It is the first metro system in Central America.

The Panama Metro is a rapid transit system in Panama City, Panama, which links the north and east sides of the metropolitan area to the city center. It was inaugurated on April 5, 2014.

It was built to relieve the traffic congestion between the city and San Miguelito District, and to offer commuters a viable alternative to road transport, as the Metrobus transport system is suffering multiple issues. The Panama Metro is part of a major "National Master Plan" to improve transportation in Panama City and the west side of the country, which includes the construction of four more metro lines and a light rail line.

Characteristics:

- Type: Metro rail system
- Location: City of Panama
- Construction started: February 2011
- Estimated investment: 1.8bn USD
- Length Line 1: 13.7 km
- Gauge: 1,435mm (standard)
- Lines: 4
- Stations: 12 shelters
- Contractors: Linea Uno Consortium

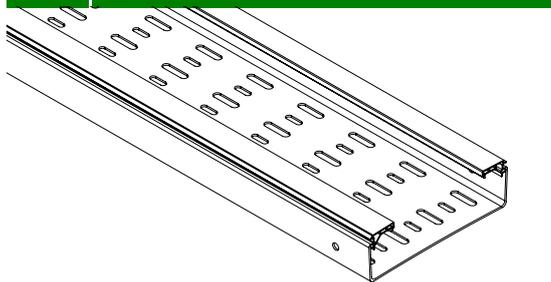

Line 1 is 13.7km-long with 12 stations, comprising seven underground and five elevated. The stations include 12 de Octubre, F. de Córdoba, Vía Argentina, Iglesia El Carmen, Marañón, Curundú, Plaza 5 de Mayo, Pan de Azúcar, San Miguelito, and Pueblo Nuevo. Line 1 included the construction of 7.3km of tunnels, 1.5km of trenches and 4.9km of viaducts.

DATA SHEET INSTALLED PRODUCT

BPE

BPE 60x100 to 60x300

BPE 100x200 to 100x600

Models (HxB):
60x100; 60x150; 60x200; 60x300; 100x200; 100x300; 100x400; 100x600.

Types: Slotted or solid bottom.

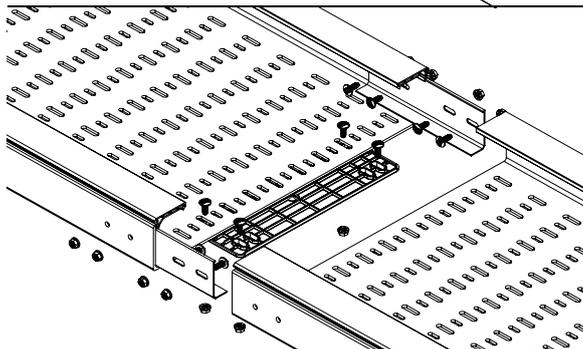

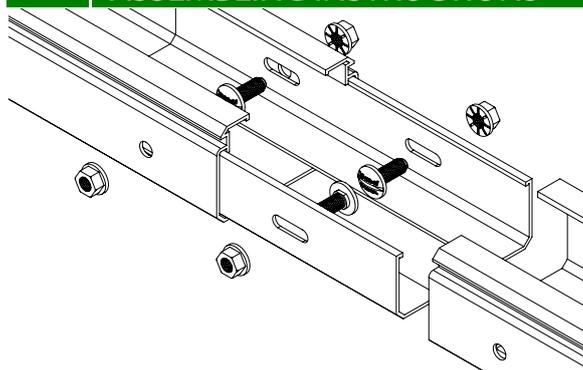

Finishes: PVC M1 UV RAL 7035

Characteristics of the tray:

- Non metallic system
- Resistant to UV radiation. Excellent behaviour in outdoor installation.
- Impact Strength: 20J, except 60x100 with 10J
- Minimum temperature: -4 °F
- Maximum temperature: 140 °F
- Non-flame propagating component
- Without electrical continuity
- Electrical insulating component
- Dielectric Strength 18 +/- 2 kV/mm
- High protection inside and outside against corrosive substances
- Plastic system resistant to humidity/salty and chemical environments according to DIN 8061 and iISO/TR 10358
- M1 reaction to fire acc. to UNE 23727
- Glow wire test degree 1760 °F, EN 60695-2-11
- Flammability UL 94-VO, ANSI/UL 94-1995
- Limiting Oxygen Index LOI > 50%, EN ISO 4589
- Comply with RoHS directive, 2011/65/UE
- Raw material without silicone

ASSEMBLING INSTRUCTIONS

- For the assembly, two union joints and four M8 Bolt sets are needed for each stretch (8 for H100 models). For trays with a width ≥ 400 mm it is necessary to use the JUBPE-C base joint to accomplish the requirements of full load transverse arrow indicated by IEC 61537. This union requires 4 screw set CTBP M8 PVC, and it can be placed inside or outside the cable tray.
- Tray installation for electrical systems should NOT run under other types of canalizations such as water, vapour or gas canalizations.
- To guarantee a good ventilation, we recommend installing the trays keeping a minimum distance of 250 mm between each tray.
- Suitable for wet, salty and chemical aggressive environments.
- To assure good performance under expansions, the increase in temperature must be noted, between the installation and the maximum temperature expected. Depending on the expected growth in the temperature (ΔT) leave a gap (h) between cable trays according to the following table :

ΔT (°F)	h (mm)
68	5
86	7
104	9
122	11

NOTE: Tests according to UL 568 Method A (Load Before Destruction), with 1.5 Safety factor

- Water absorption: The absorption of water by the material is minor than 0.5 percent.
- Dielectric strength: There is no dielectric breakdown in the material after conditioning.
- Weathering: The material retain more than 75% of the original recorded flexural strength.
- Combustibility of cable tray assemblies: Not emit flaming or glowing particles or dropping particles that ignite the cotton layer situated below the flame application point
- Flame spread: Material meet a flame spread index lower than 25.
